An Easy Trick to Help Re-Install Your Access Door

If the door on your spa is large, it can be a challenge to put it back on without using words your children should not hear. Use this trick instead.

1. Insert a long nail in the top 2 screw holes, and the bottom middle one too. This allows you to mate the door and installation holes easier than with the screws.

2. Now you can insert the door screws in their correct places, and you'll have the ability to adjust the door slightly if required. Install each screw about 1/2 of the way. When they are all in place, go back and complete the installation process.

3. Be careful not to screw too far or you'll crack a wood panel.
