

Easy Spa Parts

We know what you need.

Replacing the ClearZone CD Chip

Replacing the ClearZone CD Chip is quick, easy, and only requires a Phillips head screwdriver. For best results, replace this chip every 12 months.

1. **Turn off all power at the GFCI**
2. **Remove the access door panel**
3. **The ClearZone Generator Assembly looks like this** and is mounted with 2 screws to a wall in the equipment area. Remove the complete assembly from the wall. You should not need to unplug the cord to perform this work.

4. **Remove the 3 screws from the back of the unit.**

5. **Separate the back plate from the main box.** Look carefully at the way the wires lay in the box. You'll want to come as close as possible to duplicating this when completing the re-assembly.

6. **Lift the CD chip out of the main box.**

7. **Unplug all 3 connectors leading to the CD Chip.** Each connector has a different shape so it's impossible to re-assemble incorrectly. **Then reconnect the 3 new plugs.**

8. **Re-seat the CD Chip and wires in the main box.** The lid should fit easily onto the box without forcing anything. Look at Step 5 if you need some clues.

9. **Re-attach the lid with the 3 screws from step 4.**

10. **Re-install the ClearZone Ozone Generator Assembly** to its original place on the equipment frame.
11. **Turn power back on at the GFCI**. A light should be visible through the window on the front of the generator assembly. This tells you the replacement is successful and everything is working properly.
12. **Replace the access door panel**
