We know what you need.

WATER CAPACITY TABLE

Keeping your water properly balanced and sanitized begins with knowing the correct gallonage of your spa. The chart below answers that question. When calculating the amount of product to add, remember that getting the exact dosage is not critical because repeating an application is sometimes required. Just as important, remember to check your water regularly for a safe, clean soak every time.

Duet	150	Aurora	300	Executive	450
El Nino	150	Dream	300	Luxxor	450
Serenade	190	Nautique	310		
		Sojourn	340	Sarena Bay	500
Triad	200	Diplomat	350		
Companion	210	Arena	375	AquaSport 13'	1300
Dupree	225	Elite	375	AquaFit 16'	1700
Journey	240	Lotus Bay	375	AquaPro 19'	2400
Diamante	250				
Impulse	250	Californian	400	Dual Temp:	
Quadra	250	Chairman	400	Spa	280
Seville	250	Colosseum	400	Swim	1450
Interlude	275	Nautilus	400		
Wayfarer	275	Triton	400		
Cove	280	Amore Bay	415		
SRX	295	President	425		

1. Locate your spa from the chart to the left and round the gallonage to the nearest 100. Always round up if you are uncertain. (Gallonage has fluctuated a little over time as spa designs changed, but not enough to affect proper dosages.)
2. When calculating dosages, remember that
1 ounce = 2 tablespoons.
3. Use that old tablespoon from the kitchen that does not match anything else, and dedicate it to spa care. Rinse after each application, and keep it from the kids and animals.
